

Tea Producer Portal

Marketplace Integration Guide

Direct listings, broker mandates, auction sessions, bidding, and settlement

Audience	Tea producers, cooperatives, brokers, marketplace operators, and integration teams
Version	August 2026
Authentication	Clerk session / Bearer token

This document describes the implemented integration contract between the Tea Producer Portal and the TokenHarvest marketplace, including direct producer listings and broker-mediated listings governed by mandates.

Contents

12. 11. API Reference — Tea Lots
13. 12. API Reference — Auction Sessions
14. 13. Business Rules Cheat-Sheet
15. 14. Error Codes

Scope: How a producer pushes tea lot listings to the TokenHarvest marketplace, either by listing directly or through a licensed broker (ENABLER). Covers the mandate system, lot lifecycle, auction session mechanics, and settlement.

Base URL (development): `https://$REPLIT_DEV_DOMAIN/api` Base URL (production): see deployment configuration Authentication: All endpoints require a valid Clerk session token in the Authorization: Bearer <token> header (handled automatically when called from within the portal UI).

1. User Tiers

Tier	Portal role	Can grant mandate	Can receive mandate	Can create lots	Can bid
PRODUCER	Tea Producer Portal	✓	—	✓ (own eWRs only, direct)	—
COOPERATIVE	(same)	✓	—	—	—
ENABLER	Broker portal	—	✓	✓ (mandate required)	—
OFF_TAKER	Buyer portal	—	—	—	✓
ADMIN	Exchange admin	—	—	—	—

2. eWR — the source of truth

Every tea lot must be backed by an Electronic Warehouse Receipt (eWR). The factory integration API pushes eWRs to the platform; the portal does not create them. An eWR transitions through these states:

INGESTED → MARKET_LISTED → SETTLED

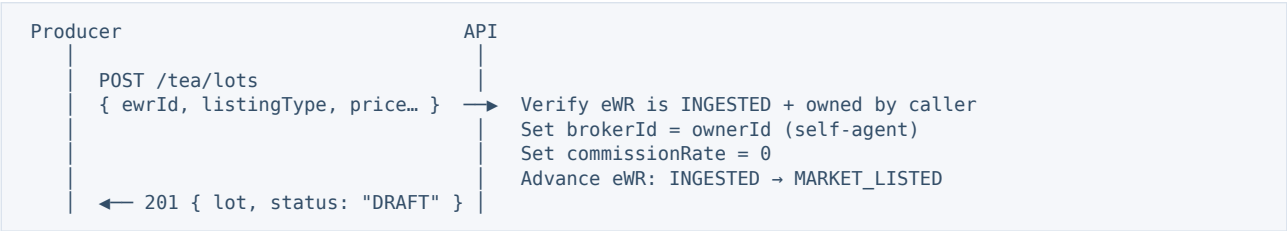

State	Meaning
INGESTED	Receipt is available for listing; no active lot against it
MARKET_LISTED	An active (non-WITHDRAWN) lot has been created against this eWR
SETTLED	The lot has been sold and the eWR ownership has been transferred to the buyer

Only INGESTED eWRs can be used to create a new lot. Creating a lot automatically advances the eWR from INGESTED to MARKET_LISTED. If the lot is later withdrawn, the eWR reverts so it can be re-listed.

3. Path A — Direct Listing (Producer Self-Lists)

A producer who has at least one INGESTED TEA eWR can create a lot themselves, bypassing a broker entirely.

Flow

UI entry point: Producer Portal → Sidebar → List Direct → /producer/lots/new

Request

```
POST /api/tea/lots
Content-Type: application/json

{
  "ewrId": 42,
  "grade": "BOP",
  "gradeMark": "NKT",
  "giOrigin": "Kenya",
  "grossWeightKg": 2000,
  "netWeightKg": 1950,
  "tareWeightKg": 50,
  "packageType": "Paper Sack",
  "listingType": "FIXED_PRICE",
  "fixedPricePerKgUsd": 3.20,
  "tasterRemarks": "Bright, brisk, good colour"
}
```

For auction listings replace `listingType` / `fixedPricePerKgUsd` with:

```
{
  "listingType": "AUCTION",
  "reservePriceUsd": 2.80
}
```

Response

```
{
  "id": 17,
  "ewrId": 42,
  "ownerId": 5,
  "brokerId": 5,
  "grade": "BOP",
  "gradeMark": "NKT",
  "giOrigin": "Kenya",
  "grossWeightKg": "2000",
  "netWeightKg": "1950",
  "tareWeightKg": "50",
  "packageType": "Paper Sack",
  "listingType": "FIXED_PRICE",
  "fixedPricePerKgUsd": "3.20",
  "commissionRate": "0",
  "status": "DRAFT",
  "createdAt": "2026-08-04T08:00:00.000Z"
}
```

Note: `brokerId === ownerId` and `commissionRate = "0"` are the canonical markers of a direct listing. The API enforces `commissionRate = 0` permanently — even a PATCH cannot change it for direct lots.

4. Path B — Broker-Mediated Listing

A PRODUCER grants an ENABLER-tier broker a mandate. The broker can then catalogue lots from the producer's eWRs, set valuations, and submit them to auction sessions.

4.1 Broker Mandate Lifecycle

Grant a mandate

Only PRODUCER or COOPERATIVE accounts can grant mandates.

POST /api/broker-mandates
Content-Type: application/json

```
{
  "brokerId": 12,
  "commodityType": "TEA",
  "permissions": ["list", "accept_bids", "negotiate", "set_reserve"],
  "commissionRateOverride": 0.015,
  "validFrom": "2026-08-01T00:00:00.000Z",
  "validTo": "2026-12-31T23:59:59.000Z"
}
```

Field	Type	Required	Notes
brokerId	integer	✓	Internal user ID of the ENABLER-tier broker
commodityType	enum	✓	"TEA" for tea mandates
permissions	string[]	—	Defaults to ["list", "accept_bids", "negotiate", "set_reserve"]
commissionRateOverride	float 0-1	—	Overrides the lot's commissionRate; e.g. 0.015 = 1.5 %. If omitted the broker sets it per lot (default 1 %)
validFrom	ISO 8601	—	Defaults to now()
validTo	ISO 8601	—	Omit for an open-ended mandate

Constraints:

- The target user must have tier = "ENABLER". Granting to any other tier returns 400.
- Only one active mandate is allowed per broker + commodity combination. Attempting a duplicate returns 409 with the existing mandate ID. Revoke the old one first.

Response 201:

```
{
  "id": 3,
  "ownerId": 5,
  "brokerId": 12,
  "brokerName": "Nairobi Tea Brokers Ltd",
  "commodityType": "TEA",
  "permissions": ["list", "accept_bids", "negotiate", "set_reserve"],
  "commissionRateOverride": "0.0150",
  "validFrom": "2026-08-01T00:00:00+00:00",
  "validTo": "2026-12-31T23:59:59+00:00",
  "revoked": false,
  "createdAt": "2026-08-04T08:00:00+00:00"
}
```

Producer views their granted mandates

GET /api/broker-mandates/given

Returns all mandates granted by the calling producer, including revoked ones. The UI shows this list at [Producer Portal → Mandates Given](#).

Broker views their received mandates

GET /api/broker-mandates/my

Returns all mandates where the calling user is the broker. Each record includes `ownerName` for display.

Revoke a mandate

Only the mandate owner (producer) can revoke.

```
DELETE /api/broker-mandates/3
```

Sets `revoked = true`, `revokedAt = now()`. A revoked mandate is immediately excluded from the broker's active eWR pool (`/ewrs/broker-available`) and any subsequent `POST /tea/lots` against that producer's eWRs will fail with 403.

Revocation does not cancel lots already created under the mandate. Lots already in `CATALOGUED`, `DISPATCHED`, or `LIVE` status continue normally. If you need to stop an in-flight lot, withdraw it separately via the broker lot management UI.

4.2 Broker Discovers eWRs

Once at least one mandate is active, the broker can see all `INGESTED` TEA eWRs from their mandate holders:

```
GET /api/ewrs/broker-available
```

Only returns eWRs where:

- The eWR owner has an active (not revoked, within `validFrom/validTo`) TEA mandate with the calling broker
- `commodityType = "TEA"`
- `state = "INGESTED"` (not already listed or settled)

UI: This feeds the eWR selector on the broker's Create Tea Lot form (`/broker/lots/new`). The selector shows receipt ID, grade, weight, warehouse, and producer name.

4.3 Broker Creates a Lot

```
POST /api/tea/lots
Content-Type: application/json

{
  "ewrId": 42,
  "grade": "BOPF",
  "gradeMark": "MKT",
  "giOrigin": "Kenya",
  "grossWeightKg": 1800,
  "netWeightKg": 1750,
  "tareWeightKg": 50,
  "packageType": "Paper Sack",
  "listingType": "AUCTION",
  "catalogueType": "WITH_VALUATION",
  "reservePriceUsd": 3.00,
  "brokerValuationUsd": 3.40,
  "commissionRate": 0.015,
  "tasterRemarks": "Clean, well-made",
  "tickTiers": [
    { "upToUsd": 5.00, "incrementPct": 0.02 },
    { "above": true, "incrementPct": 0.01 }
  ],
  "antiSnipeConfig": {
    "windowSecs": 180,
    "extensionSecs": 180,
    "maxExtensionSecs": 1800
  },
  "bidSecurityPct": 0.1
}
```

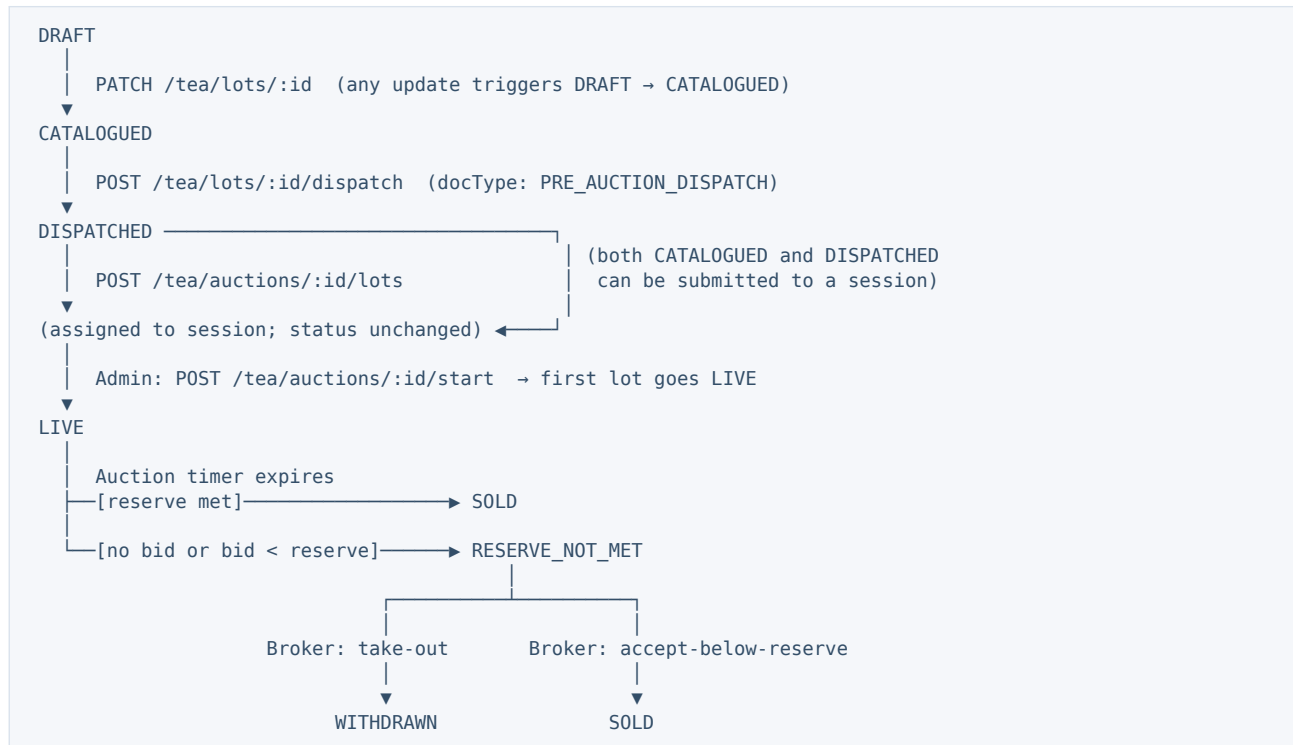

Broker-specific fields not available to direct producers:

Field	Notes
catalogueType	"WITH_VALUATION" or "WITHOUT_VALUATION"
brokerValuationUsd	Broker's assessed value per kg
commissionRate	Overridden by mandate.commissionRateOverride if set
tickTiers	Bid increment schedule (see §7.4)
antiSnipeConfig	Anti-snipe extension rules (see §7.5)
bidSecurityPct	Fraction of bid amount held as security (default 0.10)

Server validation for broker lots:

1. eWR must be INGESTED and commodityType = "TEA"
2. No existing non-WITHDRAWN lot against the same eWR (returns 409)
3. An active TEA mandate must exist from the eWR's owner to the calling broker (returns 403 otherwise)
4. Commission rate: mandate.commissionRateOverride takes precedence; commissionRate in the body is fallback

5. Lot Lifecycle & Status Machine

Status	Who can modify	Notes
DRAFT	Broker or owner	Any PATCH transitions to CATALOGUED
CATALOGUED	Broker or owner	Editable; submittable to auction sessions
DISPATCHED	—	Set automatically when PRE_AUCTION_DISPATCH doc is attached to a CATALOGUED lot
LIVE	—	Auction is running; no metadata edits allowed
SOLD	Admin (settlement)	Lot sold; settlement record created
RESERVE_NOT_MET	Broker or admin	Broker decides: take-out or accept below reserve
WITHDRAWN	—	Terminal; eWR returns to INGESTED for re-listing

6. Dispatch Documents

Before submission to an auction session, the broker may (optionally) attach a pre-auction dispatch form to advance the lot from **CATALOGUED** to **DISPATCHED**. Both statuses are eligible for session submission.

```
POST /api/tea/lots/17/dispatch
Content-Type: application/json

{
  "docType": "PRE_AUCTION_DISPATCH",
  "docData": {
    "vehicleRegNo": "KCA 123X",
    "driverName": "John Kamau",
    "departureDate": "2026-08-05",
    "dispatchWarehouse": "WRSC-NRB-001"
  }
}
```

docType	Allowed when	Effect
PRE_AUCTION_DISPATCH	Lot is CATALOGUED	Advances lot → DISPATCHED
WEIGHTMENT_REPORT	Any pre-LIVE status	No status change; records weightment
DELIVERY_ORDER	Lot is SOLD	No status change; records issuable delivery order

Retrieve all documents for a lot:

```
GET /api/tea/lots/17/dispatch
```

7. Auction Session Flow

7.1 Create a Session (Admin)

Only ADMIN accounts can create auction sessions.

```
POST /api/tea/auctions
Content-Type: application/json

{ "auctionDate": "2026-08-10" }
```

Response 201:

```
{
  "id": 7,
  "auctionDate": "2026-08-10",
  "status": "SCHEDULED",
  "catalogueOrder": [],
  "currentLotId": null,
  "createdAt": "2026-08-04T09:00:00+00:00"
}
```

7.2 Broker Submits Lots

Only ENABLER (broker) accounts can submit lots to a session. The session must be SCHEDULED.

```
POST /api/tea/auctions/7/lots
Content-Type: application/json

{ "lotIds": [17, 18, 22] }
```

Validation rules:

- All lot IDs must exist
- All lots must have status CATALOGUED or DISPATCHED

- The calling broker must be the brokerId on each lot (brokers can only submit their own mandate lots)
- Lots already assigned to a different session are rejected with 400 (conflict)
- Lots already in this session are silently de-duplicated (idempotent)

The catalogueOrder array on the session records the order in which lots will be auctioned. Each additional call appends to the existing order.

UI: Broker Portal → Sidebar → Auction Sessions → expand a SCHEDULED session → check lots → Submit.

7.3 Admin Starts the Session

```
POST /api/tea/auctions/7/start
Content-Type: application/json

{ "durationMins": 7 }
```

Field	Default	Range	Notes
durationMins	7	1-120	Per-lot auction duration in minutes

Starting a session:

1. Sets session status → LIVE
2. Sets currentLotId to the first lot in catalogueOrder
3. Sets that lot's status → LIVE, records auctionStartAt and auctionEndAt
4. Broadcasts a tea_lot_live SSE event to all connected clients

The auction engine then automatically progresses through lots (each lot runs for durationMins). When a lot closes, the next lot in catalogueOrder goes LIVE.

7.4 Live Bidding

Only OFF_TAKER tier accounts can bid. Owners cannot bid on their own lots.

```
POST /api/tea/lots/17/bids
Content-Type: application/json

{ "amountUsd": 3.20 }
```

Tick tiers — minimum bid increment:

```
"tickTiers": [
  { "upToUsd": 5.00, "incrementPct": 0.02 },
  { "above": true, "incrementPct": 0.01 }
]
```

Current high bid	Minimum next bid
< USD 5.00	current × 1.02
≥ USD 5.00	current × 1.01
No bids yet	reservePriceUsd

If tickTiers is empty, any bid above the current high is accepted.

Bid security hold: On each successful bid, bidSecurityPct × amountUsd (default 10 %) is recorded as a HELD bid-security hold against the bidder. When a bidder is outbid, their previous hold is immediately released. Only the winning bid's hold remains HELD at lot close, and is released on settlement confirmation.

Response 201:

```
{
  "bid": {
    "id": 44,
    "lotId": 17,
    "bidderId": 9,
    "amountUsd": 3.20,
    "isWinning": true,
    "placedAt": "2026-08-10T10:03:15+00:00"
  },
  "antiSnipeTriggered": false,
  "newEndAt": null,
  "bidSecurityHeldUsd": 0.32
}
```

7.5 Lot Closure & Anti-Snipe

Anti-snipe configuration (set per lot at creation):

```
"antiSnipeConfig": {
  "windowSecs": 180,
  "extensionSecs": 180,
  "maxExtensionSecs": 1800
}
```

Parameter	Default	Meaning
windowSecs	180	If a bid arrives within this many seconds of auctionEndAt, trigger an extension
extensionSecs	180	How many seconds to add to auctionEndAt
maxExtensionSecs	1800	Total extension cap across all anti-snipe triggers for this lot

When triggered, antiSnipeTriggered: true and the updated newEndAt are included in the bid response and broadcast via SSE.

8. Post-Auction Decisions

When a lot's auction clock reaches zero, the engine determines the outcome:

Reserve met → lot status = SOLD automatically (settlement record created).

Reserve not met (no bids, or all bids below reserve) → lot status = RESERVE_NOT_MET. The mandate broker (or ADMIN) then has two options:

Take out (withdraw)

The broker decides the tea should not sell at the offered price and withdraws the lot.

```
POST /api/tea/lots/17/take-out
```

- Lot → WITHDRAWN
- All remaining HELD bid-security holds released
- The underlying eWR does not revert automatically (remains MARKET_LISTED). To re-list you must create a new lot once any cleanup is complete.

Accept below reserve

The broker accepts the highest bid even though it is below the reserve price.

```
POST /api/tea/lots/17/accept-below-reserve
```

This creates a settlement record identical to a normal sale:

- Lot → SOLD
- Settlement record created with `acceptedBelowReserve = 1`
- eWR ownership transferred to buyer
- eWR state → SETTLED
- Fee breakdown calculated (see §9)

9. Settlement

After a lot is sold (either at reserve or below), the exchange admin confirms payment receipt.

```
POST /api/tea/lots/17/settle
```

Effect:

- `paymentStatus`: PENDING → PAID
- `deliveryOrderStatus`: NOT_ISSUABLE → ISSUABLE
- Winning bidder's bid-security hold released

View settlement detail:

```
GET /api/tea/lots/17/settlement
```

Accessible to: ADMIN, lot owner (producer), lot broker, and the winning buyer.

Response:

```
{
  "lotId": 17,
  "sessionId": 7,
  "winningBidId": 44,
  "buyerId": 9,
  "buyerName": "East Africa Tea Imports Ltd",
  "grossAmountUsd": "3.20",
  "platformFeeUsd": "0.02",
  "brokerCommissionUsd": "0.05",
  "netProducerAmountUsd": "3.13",
  "promptDate": "2026-08-17",
  "paymentStatus": "PAID",
  "deliveryOrderStatus": "ISSUABLE",
  "acceptedBelowReserve": 0
}
```

Fee calculation:

Component	Rate	Calculation
Platform fee	0.5 %	<code>grossAmount × 0.005</code>
Broker commission	varies	<code>grossAmount × commissionRate</code>

Component	Rate	Calculation
Net to producer	—	grossAmount – platformFee – brokerCommission

For direct listings, $\text{commissionRate} = 0$, so the producer receives $\text{grossAmount} - \text{platformFee}$.

Prompt date: automatically calculated as the next available prompt date following the auction date (T + settlement window). Returned in YYYY-MM-DD format.

After settlement the broker may issue a Delivery Order:

```
POST /api/tea/lots/17/dispatch
Content-Type: application/json

{
  "docType": "DELIVERY_ORDER",
  "docData": {
    "issuedTo": "East Africa Tea Imports Ltd",
    "collectionPoint": "WRSC-NRB-001",
    "validUntil": "2026-08-24"
  }
}
```

10. API Reference — Mandates

Method	Path	Actor	Description
POST	/broker-mandates	PRODUCER / COOPERATIVE	Grant a mandate to a broker
GET	/broker-mandates/given	PRODUCER / COOPERATIVE	List mandates I have granted
GET	/broker-mandates/my	ENABLER	List mandates granted to me
DELETE	/broker-mandates/:id	PRODUCER (owner only)	Revoke a mandate

Mandate object

```
{
  id: number;
  ownerId: number;
  ownerName?: string; // included in /my
  brokerId: number;
  brokerName?: string; // included in /given and POST response
  commodityType: "TEA" | "MAIZE" | "RICE" | "COFFEE" | "AVOCADO";
  permissions: string[]; // ["list", "accept_bids", "negotiate", "set_reserve"]
  commissionRateOverride: string | null; // numeric string, e.g. "0.0150"
  validFrom: string; // ISO 8601 with timezone
  validTo: string | null; // null = open-ended
  revoked: boolean;
  revokedAt: string | null;
  createdAt: string;
}
```

11. API Reference — Tea Lots

Method	Path	Actor	Description
POST	/tea/lots	PRODUCER or ENABLER	Create a lot (direct or broker)
GET	/tea/lots	Any authenticated	List lots (filterable)
GET	/tea/lots/:id	Any authenticated	Full lot detail
PATCH	/tea/lots/:id	Broker or owner	Update DRAFT/CATALOGUED lot
POST	/tea/lots/:id/dispatch	Broker or owner	Attach a dispatch document
GET	/tea/lots/:id/dispatch	Any authenticated	Retrieve dispatch documents
POST	/tea/lots/:id/bids	OFF_TAKER	Place a bid on a LIVE lot
POST	/tea/lots/:id/take-out	Broker or ADMIN	Withdraw a RESERVE_NOT_MET lot
POST	/tea/lots/:id/accept-below-reserve	Broker or ADMIN	Sell below reserve
POST	/tea/lots/:id/settle	ADMIN	Confirm payment, enable delivery order
GET	/tea/lots/:id/settlement	ADMIN, owner, broker, buyer	Settlement detail

GET /tea/lots query parameters

Parameter	Type	Example	
grade	string	BOPF	
giOrigin	string	Kenya	
listingType	AUCTION \	FIXED_PRICE	AUCTION
status	lot status enum	CATALOGUED	
brokerId	integer	12	
ownerId	integer	5	
certification	string	Rainforest Alliance	

GET /ewrs/broker-available

Only for ENABLER tier. Returns INGESTED TEA eWRs owned by active mandate holders.

```
GET /api/ewrs/broker-available
```

12. API Reference — Auction Sessions

Method	Path	Actor	Description		
POST	/tea/auctions	ADMIN	Create a SCHEDULED session		
GET	/tea/auctions	Any authenticated	List sessions (`?status=SCHEDULED`)	LIVE\	CLOSED`)
GET	/tea/auctions/:id	Permitted users	Session detail + ordered lot list with live bid data		
POST	/tea/auctions/:id/lots	ENABLER or ADMIN	Submit lots to a SCHEDULED session		
POST	/tea/auctions/:id/start	ADMIN	Start the session; first lot goes LIVE		

Session statuses

Status	Meaning
SCHEDULED	Accepting lot submissions; not yet started
LIVE	Auction is running
CLOSED	All lots have been auctioned

13. Business Rules Cheat-Sheet

Rule	Detail
One active mandate per broker + commodity	409 on duplicate; revoke the existing one first
Mandate scope	A TEA mandate only covers TEA eWRs (validated by commodityType = "TEA")
Revocation is immediate	Revoked mandates no longer appear in /ewrs/broker-available and block new lot creation; existing lots are unaffected
One active lot per eWR	Any non-WITHDRAWN lot blocks re-listing the same eWR (409)
DRAFT auto-transitions on first PATCH	The first successful PATCH /tea/lots/:id sets status → CATALOGUED and records publishedAt
Commission lock on direct lots	commissionRate is permanently locked at 0 for direct (self-agent) listings; PATCH cannot change it
Commission source priority	mandate.commissionRateOverride > commissionRate in request body > default 1 %
Broker can only submit their own lots	Session lot submission checks lot.brokerId === caller.id
Lots must be CATALOGUED or DISPATCHED	to be submitted to a session
Only OFF_TAKER can bid	PRODUCER, ENABLER, and ADMIN accounts cannot place bids
Owner cannot bid on own lot	Returns 403
Bid must meet tick floor	Minimum = calcMinBid(currentHigh, tickTiers) or reservePriceUsd if no bids
Bid security hold	bidSecurityPct × amountUsd (default 10 %); outbid holds released immediately
Anti-snipe	Default: 3-minute window, 3-minute extension, 30-minute total cap
Settlement is ADMIN-only	Only ADMIN can call POST /tea/lots/:id/settle
eWR ownership transfer on sale	On SOLD (at reserve or accept-below-reserve), ewr.ownerId → buyer.id, ewr.state → SETTLED
Delivery Order gated on SOLD	POST /tea/lots/:id/dispatch with docType: DELIVERY_ORDER rejected unless lot is SOLD

14. Error Codes

HTTP	error	Cause
400	"eWR is not available for listing. Current state: X"	eWR not INGESTED
400	"reservePriceUsd is required for AUCTION lots"	Missing reserve on auction lot
400	"durationMins must be a whole number between 1 and 120"	Invalid session start duration
400	"Lot cannot be updated in status X"	PATCH on LIVE/SOLD/WITHDRAWN lot
400	"Cannot add lots to a session with status X"	Session not SCHEDULED
400	"Bid must be at least \$X"	Below tick floor; response includes minBidUsd
400	"Lot must be in RESERVE_NOT_MET status"	Take-out or accept-below-reserve on wrong status
400	"Payment is already X"	Settlement already confirmed
400	"Delivery Orders can only be issued for SOLD lots"	Delivery order precondition
400	"Mandate is already revoked"	Double-revoke attempt
403	"No active TEA mandate from the eWR owner"	Broker has no valid mandate for the eWR's owner
403	"Producers can only create lots from eWRs they own"	PRODUCER tried to list another owner's eWR
403	"Only the mandate broker or owner can update this lot"	Third-party PATCH attempt
403	"You can only submit lots where you are the mandate broker"	Broker submitted another broker's lot
403	"Owner cannot bid on their own lot"	Self-bid attempt
403	"Only the mandate owner can revoke it"	Broker tried to revoke their own mandate
403	"Only PRODUCER or COOPERATIVE accounts can grant broker mandates"	Wrong tier granting mandate
403	"Target user is not an ENABLER"	Mandate granted to non-broker
409	"An active mandate already exists for this broker and commodity"	Duplicate active mandate; includes existingMandateId
409	"An active lot (ID: X, status: Y) already exists for this eWR"	Duplicate lot for same eWR
